Lux Elements expands product range

Leverkusen, 10.02.2020

Channel design from wall to wall now also in a length of 1800 mm

In the 2020 product range, Lux Elements is expanding the range of channel drains in hard foam with a universal channel look by the Tub-Line V RT product with a length of 1800 mm and a width of 200 mm. In combination with the Tub-Line GK sealed hard foam gradient element measuring 1800 x 1000 mm, a generously sized shower area of 1800 x 1200 mm can be achieved.

If the prefabricated gradient element is neither necessary nor desired, the gradient can alternatively be formed with screed and additional sealing.

The design solution with extended stainless steel cover rail and extended tiling aid for the uniform channel look can be infinitely shortened and enables a high degree of flexibility when installing in both existing and new buildings.

A matching substrate element and height adapter for adaptation to the floor covering as well as an odour trap are already included in the product set.
